To identify the critical features of the interactions between  
incentive motivation and confidence accuracy, the accuracy of  
confidence was incentivized with monetary prospects whose  
magnitude and valence were systematically varied see Fig.  
Whitmore Type 2 tasks in the theory of signal detectability:  
Yet, the biasing effect of incentives is in line with the value-confidence hypothesis.  
Imagine analysts for example, in the medical or financial  
domain handing in independent recommendations on a case: The  
reported effects of incentives on confidence also confirm that  
confidence judgments not only represent rational estimates of  
the probability of being correct<sup>3</sup> but also integrate  
information and potential biases processed after a decision is
