Such phenomena are also exemplified by superconductivity completely resistance-less flow of electricity a low-temperature property of certain metallic and ceramic materials. A physical theory is a model of physical events.

The modern theory of gravitation was formulated by Albert Einstein and is a solid material. The greatest theoretical advances have been in the study of crystalline materials whose simple repetitive geometric arrays of atoms are multiple-particle systems that allow treatment by quantum mechanics. As the modern sciences developed and became increasingly specialized, physics came to denote that part of physical science not included in astronomy, chemistry, geology and engineering.
