According to the former "family law" the head of the family was the husband, and the wife could not work without the permission of her husband. It explains also how to decompose changes in segregation.

Similarly, a low male employment rate does not necessarily point to a small gender gap. Thus, some of the sex difference in work experience coefficients may reflect women's own investment decisions based on their work expectations. This article is also available for rental through DeepDyve. Even if discrimination is made compatible with occupational segregation in the Becker model, segregation does not play a causal role in generating the sex pay differential.

Yet the heart of the endogeneity problem is that wage discrimination may have a fact, as Mincer explains, the female labor force grows not only through "widening" increases in the flow of entrants or reentrants but also through "deepening" decreases in the flow of ex- iters.
