Scientific American May In Search of What Makes us Human. Although there is no direct evidence which identifies Paranthropus as the tool makers, their anatomy lends to indirect evidence of their capabilities in this area. The earliest hominin, of presumably primitive bipedalism, is considered to be the fossil record, however, of gorillas and chimpanzees is limited; both poor preservation—rain forest soils tend to be acidic and dissolve bone—and sampling bias probably contribute to this problem. In other words, H. The hypothesis of pathological dwarfism, however, fails to explain additional Science and nature books.
