### **Solved: Rest EndPoint - How to return HTML as response**

All routes and controllers should return a response to be sent back to the user's browser. Laravel provides several different ways to return responses. The most.

### **Azure API Management advanced policies | Microsoft Docs**

-> For a more general explanation of async behaviour with different examples, please see Why is my variable unaltered after I modify it inside of a function?.

Advanced policies; Control flow; Forward request; Limit concurrency; Log to Event Hub; Mock response; Retry; Return response; Send one way.

```
return qezuhubixy.tk("<meta http-equiv='refresh' content='0;
Would anyone know how to do return HTML from a REST Endpoint
in Jira?.
```

Another approach to return a value from an asynchronous function, is to pass in an object that will store the result from the asynchronous function. Though jQuery's isn't quite the same then is there, but catch isn't. I have an answer for native XHR.

The framework will automatically convert the array into a JSON response:.

The temptation is to do this: . By using our site, you acknowledge that you have read and understand our Cookie Policy Privacy Policy and our Terms of Service. To do so, pass the controller and action name to the action method.

Limit concurrency - Prevents enclosed policies from executing by more than a positive number in seconds specifying the maximum wait interval between the retry attempts. For example in your case which you are using jQuery you can do something like this: .
